

DEAN & MARCHES

Almost 40 people joined the visit to Jacob Engineering for our March event. Jacob Engineering manufacture and restore a range of classic racing cars, many which are Jaguar based competition models. All the work is carried out in house including fabrication and machining and all engine and transmission builds. The attention to detail is just stunning, right down to making period clips for cable and wiring looms. A beautifully equipped machine shop with mostly old style machine tools, not much use of CAD/CAM here. All the car builders in our group were just amazed at the quality of work. We have been invited back in the future for another look at progress.

Our next meeting will be on Tuesday 30th April. We will be taking a look at cheese making and doing a little tasting. The venue is at local cheese maker at Smarts Farm, Old Ley Court, Birdwood, Glos. GL2 8AR or 162/742178. Start time is 7.30 pm and please note that this visit is on a Tuesday.

Everyone is welcome to come and see and taste something different.

Stuart Harrold
